Software Engineering Student

SUMMARY

Computer Science Engineering student specializing in full-stack mobile (Flutter) and robust backend services (Spring Boot). Proven ability to deliver production-ready MVPs, enforce strict architectural boundaries, and optimize data flows under strict constraints.

SKILLS

- **Languages:** Java, Dart, TypeScript, SQL (PostgreSQL, MySQL)
- **Mobile & Frontend:** Flutter (BLoC, Clean Architecture), Angular, Android SDK
- **Backend & Tools:** Spring Boot, RESTful APIs, Docker, Git, GitHub Actions, OAuth 2.0 / JWT
- **Spoken Languages:** French (Delf B2), English (C1)

PROJECTS

ApplyFlow - Job Application Tracker [Case Study] *Angular, Spring Boot, PostgreSQL, Docker*

- Built a full-stack platform to automatically generate and dispatch application emails, tracking state changes and success rates via built-in analytics.
- Integrated Bucket4j rate limiting into a Spring Boot backend to gracefully handle outbound email traffic, preventing Gmail API 429 quota errors.
- Eliminated database storage bottlenecks by engineering a Spring Boot pipeline that streams PDFs directly from Google Drive to Gmail payloads in-memory.

Remote Control [Case Study] *Flutter, Dart, Android Consumer IR API*

- Built a custom Flutter utility within a 72-hour sprint to replace an undocumented knockoff TV remote from scratch.
- Researched carrier frequencies and brute-forced 8-bit address spaces via the native Android Consumer IR API until the television responded.
- Developed diagnostic UI to fire hex commands, test frequencies, and map out the function of each discovered signal.

AI Partner - Offline Translation Tool [Case Study] *Flutter, Clean Architecture, Google ML Kit*

- Built an offline-first translation app using Google ML Kit to process OCR text extraction, language translation, and Text-to-Speech (TTS) entirely on-device.
- Enforced strict Clean Architecture boundaries by isolating third-party SDKs behind service singletons and managing unidirectional data flow via Cubit.
- Accepted a larger initial payload size to bundle ML models locally, complementing the offline architecture with custom haptics and on-device notifications for a tactile UX.

IIT-Internship-Workflow - Academic Portal [Case Study] *Spring Boot, Angular, PostgreSQL, WebSockets*

- Developed a centralized Spring Boot and Angular platform to digitize internship supervision workflows and ensure traceability.
- Secured backend REST endpoints against Insecure Direct Object Reference (IDOR) vulnerabilities by enforcing strict resource-ownership validation checks.
- Minimized MVP overhead by consciously choosing simple local storage abstraction and fire-and-forget async emails instead of over-engineering cloud infrastructure and message brokers.

EXPERIENCE

Mobile & Full-Stack Intern - STEG CTI *July 2025 (1 month)*

- Developed an MVP internship management portal using Flutter Web and PHP, implementing JWT authentication and Role-Based Access Control (RBAC) to secure administrative data access.
- Collaborated closely with internal users to iterate on requirements and ship a functional MVP within a one-month timeline.

Mobile Developer Intern - CVPT *Jan 2024 - May 2024*

- Migrated a legacy native mobile application to a unified Flutter codebase, standardizing UI/UX and ensuring feature parity across Android and iOS while cutting maintenance overhead.
- Implemented BLoC state management and Clean Architecture principles to strictly decouple UI presentation from network layers.

Mobile Developer Intern - EVASTIN *July 2023 - Aug 2023*

- Rapidly translated e-commerce wireframes into two fully interactive Flutter mobile prototypes, establishing the core UI navigation and state routing.
- Delivered a functional, reusable presentation layer that accelerated client design approvals and served as the foundational UI architecture for the core backend development team.

EDUCATION

Engineering Degree, Computer Science - International Institute of Technology, Sfax (IIT) *2024 - Present*

Bachelor's Degree, IoT & Embedded Systems - The Higher Institute of Information Technologies and Communication (ISTIC) *2021 - 2024*
